LAB Questions

1. Android Environment Setup

Create a simple Android application named *HelloMobile* using Android Studio. Configure the SDK and emulator, run the application on the emulator, and display "Hello Mobile Programming" on the screen.

2. User Interface Design Using Layouts

Design an Android UI using LinearLayout, RelativeLayout (or ConstraintLayout), and include TextView, EditText, and Button. Set layout attributes such as orientation, margin, padding, and gravity.

3. Event Handling and Resource Management

Create an Android application with a Button. When the button is clicked, display a message using string resources and change the background color using color resources. Use a drawable resource for the button icon.

4. Activity and Intent Implementation

Develop an Android application with two activities. Enter text in the first activity and pass it to the second activity using an explicit intent. Display the received text in the second activity.

5. Fragment, Menu, and Dialog Implementation

Create an Android application using fragments. Implement an options menu and display an alert dialog when a menu item is selected.

6. RecyclerView Implementation

Create an Android application that displays a list of items (e.g., names or products) using RecyclerView with a custom adapter and ViewHolder.

7. SQLite Database Integration

Develop an Android application to store user information (ID, Name, Email) using SQLite. Implement insert, update, delete, and view operations and display the records in a list.

8. API Integration

Create an Android application that fetches JSON data from a public REST API and displays the data in a RecyclerView.
