CERTIFICATE OF COMPLETION

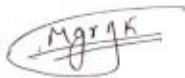

Date: 2026/09/29

Dear Ms. Swosti Makaju

Subject: Letter of Completion of Internship

This letter is to confirm that **Ms. Swosti Makaju**, a student of **Swastik College**, has successfully completed her internship with **Aeditech IT Company Pvt. Ltd.** as a **Flutter Developer Intern**. The tenure of her internship was from **15th June, 2026 to 16th September, 2026**.

During her internship, she was involved in key responsibilities and App developement projects. We would like to express our appreciation for her contributions to our company. She approached her tasks with dedication and enthusiasm, and her contributions were highly valuable to our team. We wish Swosti Makaju continued success in her academic and professional endeavors.

Sincerely,
Nishan Kumar Sunari Magar
Chief Technology Officer

MENTOR'S RECOMMENDATION FROM COMPANY

Date: 2026/09/29

MENTOR'S RECOMMENDATION

I formally recommend that the internship report be prepared under my mentorship by **Ms. Swosti Makaju (113102097)**, who served as a **Flutter Developer Intern** from **15th June, 2026 to 16th September, 2026**.

This report is in partial fulfillment of the requirements for the degree of Bachelor in Computer Application (BCA) of Tribhuvan University to be processed for evaluation. During his tenure at **Aeditech IT Company Pvt. Ltd.**, she demonstrated exceptional skill and professionalism in his field.

Sincerely,
Nishan Kumar Sunari Magar
Chief Technology Officer

Tribhuvan University

Faculty of Humanities and Social Sciences

Swastik College

SUPERVISOR'S RECOMMENDATION

I hereby recommend that this internship report prepared under my mentorship by **Swosti Makaju**, entitled “**Mobile Based App Development With Flutter**”, submitted in partial fulfillment of the requirements for the degree of Bachelor of Computer Application, for final evaluation.

SIGNATURE

Mr. Prajwal Bista

LETTER OF APPROVAL

This is to certify that the internship report prepared by **Swosti Makaju**, entitled “**Internship on Mobile Based App Development With Flutter**”, in partial fulfillment of the requirements for the degree of Bachelor of Computer Application, has been duly evaluated. In our opinion, the report meets the required standards in terms of scope and quality for the required degree.

..... Supervisor Mr. Prajwal Bista Swastik College	 Coordinator Miss Susan Sunuwar Swastik College
..... Internship Mentor Mr. Nishan Kumar Sunari Magar	 External Examiner TU

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to all those who have contributed to the successful completion of my internship program.

First and foremost, I am deeply thankful to my intern supervisor, **Mr. Nishan Kumar Sunari Magar**, at **Aeditech Software Company**, for giving me the valuable opportunity to intern at the organization. I am truly grateful to all the mentors and staff members for their constant guidance, cooperation, direction, and unwavering support throughout the entire internship period.

I extend my heartfelt thanks to our respected project supervisor and esteemed lecturer, **Mr. Prajwal Bista**, Department of Humanities and Social Science, for his insightful suggestions, continuous encouragement, motivation, and expert guidance that played a vital role in completing this report successfully.

The accomplishment of this internship report would not have been possible without the collective efforts and assistance from many individuals. I am fortunate to have received ongoing support from the entire faculty, and I sincerely acknowledge their contributions.

Finally, I wish to convey my deepest gratitude to my friends, family, and everyone else who supported me directly or indirectly during this internship journey.

Swosti Makaju

6-2-1131-55-2022

ABSTRACT

The project focuses on the structured development of a Mobile Application Development using Flutter for the frontend, Django REST Framework for backend services, and PostgreSQL for database. The primary goal is to design a secure, scalable, and efficient mobile solution that effectively tracks students info, documents required to fill, practice MCQs, able to read the books online to meet real-world consultancy management needs. The development process includes project planning, requirement analysis, robust database design using postgresQL, backend implementation with Django MTV architecture, authentication, and Restful APIs, along with a Flutter(dart) frontend for cross-platform compatibility. Security practices, thorough testing, and debugging ensure a reliable, user-centered application that streamlines business operations.

Keywords: Mobile Application, Flutter(dart), Django, PostgreSQL, Restful API

CHAPTER 1 INTRODUCTION

1.1. Introduction

The rapid growth of information technology has transformed the way organizations provide services, manage information, and interact with users. Mobile applications have become an important tool for service delivery as they provide convenient and accessible services through smartphones. Educational consultancy organizations can also use mobile applications to simplify student services, improve communication, and manage information efficiently.

The project entitled "Mobile Based App Development With Flutter" was undertaken during my internship at Aeditech Software Company, where I worked as a Mobile Application Development Intern. The project focused on developing the Nibangsh Consultancy Application, a mobile application designed to digitalize educational consultancy services for students and administrators. It provides features such as student registration, application form submission, document management, application tracking, study materials, MCQs, and notifications.

In the first week of the internship, I also worked on the initial phase of Chhingu Online Service, a mobile application for accessing online services such as LC issue, CCV1, final flight, job application, and exam services. I attended the orientation, took part in requirement gathering and project planning, and created its authentication, home, services, profile, admin, user, and process records screens. After this phase, my work focused mainly on the Nibangsh Consultancy Application.

The application was developed with Flutter and Dart for the frontend, supporting both Android and iOS platforms. The backend was developed using Django REST Framework, with PostgreSQL used for database management. REST APIs are used for communication between the mobile application and backend.

Throughout the internship, I worked on user interface development, authentication, document uploads, API integration, and student and administrator modules. The

Nibangsh Consultancy Application has been submitted to the Apple App Store and is currently under review, while its Google Play Store publication is in process.

1.2. Problem Statement

Educational consultancy services often involve manual form filling, document submission, communication, and application-status tracking. Students may need to visit consultancy offices multiple times and rely on different communication channels to obtain information and updates. This can make the process time-consuming and difficult to manage.

The **Nibangsh Consultancy Application** aims to provide a centralized mobile platform where students can access consultancy services, submit required documents, track applications, and receive relevant information through a single application available on **Android and iOS** platforms.

1.3. Objective

The main objective is to develop a user-friendly Flutter application for Android and iOS which aims to digitalize consultancy services and simplify the application process. The system also enables secure API integration and application status tracking.

1.4. Scope and Limitations

1.4.1. Scope

The scope of the internship includes the following:

- **Consultancy Service Management:** Enables students to register, complete application forms, upload required documents, track their application progress, access study materials, and practice MCQs through a centralized mobile application.

- **Flutter-Based Mobile Application Development:** The application is developed using the Flutter framework and Dart programming language, providing a maintainable and scalable codebase. The application is developed for both Android and iOS platforms using a single Flutter codebase.
- **Django REST API Integration:** The mobile application communicates with the backend through RESTful APIs developed using Django REST Framework, enabling secure authentication, data retrieval, document management, and application tracking.
- **Role-Based Access Control:** Provides separate functionalities for students and administrators. Students can manage their profiles, applications, and documents, while administrators can manage student records, application processes, notifications, books, and MCQ content through dedicated administrative modules.
- **Responsive User Interface:** Implements a clean, user-friendly, and responsive interface optimized for Android and iOS devices to provide a consistent user experience across different screen sizes.
- **PostgreSQL Database Management:** Uses PostgreSQL to store and manage user information, application records, documents, notifications, and other system data.

1.4.2. Limitations

The internship has the following limitations:

- **Backend Integration:** Authentication, Books, and MCQ modules are integrated with the Django backend deployed on Render, while integration of some remaining modules is still being completed.
- **Platform Availability:** Built for both Android and iOS. The iOS version is under review on the Apple App Store, and the Google Play Store release is in process.
- **Ongoing Refinement:** Some modules and API integrations are still being refined and tested before the final release.
- **Future Enhancement:** Features such as advanced push notifications, live chat, payment gateway integration, offline synchronization, and multilingual support may be considered for future versions.

1.5. Report Organization

This internship report is organized into five chapters, each covering a distinct aspect of the internship experience.

Chapter 1 – Introduction: Covers the general introduction to the internship, including the problem statement, objectives, and the scope and limitations of the work undertaken.

Chapter 2 – Organization Overview: Describes the organization where the internship took place, including its structure, working domains, and the specific department in which the intern was placed.

Chapter 3 – Literature Review: Presents the background study and theoretical foundation relevant to the projects undertaken during the internship.

Chapter 4 – Roles and Responsibilities: Details the tasks and activities performed throughout the internship, including weekly activity logs, project descriptions, and specific contributions made.

Chapter 5 – Conclusion and Learning Outcomes: Presents the key takeaways, professional growth, and learning outcomes gained from the overall internship experience.

CHAPTER 2 INTRODUCTION TO ORGANIZATION

2.1. Organization Details

Figure 2.1: Organizational Logo

Aeditech Software Company is a Nepal-based startup software company that develops modern web and mobile applications for businesses and organizations. The company focuses on delivering customized software solutions that meet client requirements while emphasizing simplicity, functionality, and user experience. Despite being a startup, Aeditech Software Company has successfully worked on various software projects, providing services such as mobile application development, web development, backend development, software maintenance, and technical support.

The company develops software solutions using modern technologies such as **Flutter** for cross-platform (Android and iOS) mobile application development and **Django REST Framework** for backend services. Communication between the frontend and backend is performed through RESTful APIs. **PostgreSQL** is used for database management in the Nibangsh Consultancy Application.

Being a startup, the company follows a collaborative work culture where team members communicate closely and contribute to different stages of software development. Employees and interns are encouraged to learn new technologies, solve real-world problems, and actively participate in project discussions. This environment provides interns with practical exposure to professional software development practices and helps them strengthen both technical and interpersonal skills.

During my internship, I worked as a **Mobile Application Development Intern** and contributed to the development of the **Nibangsh Consultancy Application**, where I

was responsible for developing user interfaces using Flutter and integrating them with backend APIs developed using Django REST Framework.

Table 2.1 Organization Details

Particular	Time
Organization Name	Aeditech Software Company
Company Type	Private Software Development Company
Industry	Information Technology (IT)
Location	Kathmandu, Nepal
Internship Department	Mobile Application Development
Position	Mobile App Developer (Flutter Intern)
Technologies	Flutter, Dart, Django, Django REST Framework, PostgreSQL, Git

2.2. Organization Hierarchy

Aeditech Software Company follows a simple organizational structure that supports efficient communication and collaboration among team members. As a startup, the company maintains a lean hierarchy, allowing different teams to work closely throughout the software development process. This structure enables faster decision-making, better coordination, and effective project management.

The company is headed by the **Chief Executive Officer (CEO)**, who oversees the overall operation and strategic direction of the organization. Under the CEO is the **Project Manager**, who is responsible for managing software projects, coordinating team activities, assigning tasks, and ensuring projects are completed on schedule.

The Project Manager supervises several functional teams, including the **Web Development Team**, **Mobile Development Team**, **Quality Assurance (QA) Team**, and **Accounting Team**. The Web Development Team is further divided into

Frontend Development and **Backend Development** teams. During my internship, I worked in the **Mobile Development Team** as a **Mobile Application Development Intern**, collaborating with backend developers to integrate REST APIs into the Flutter application.

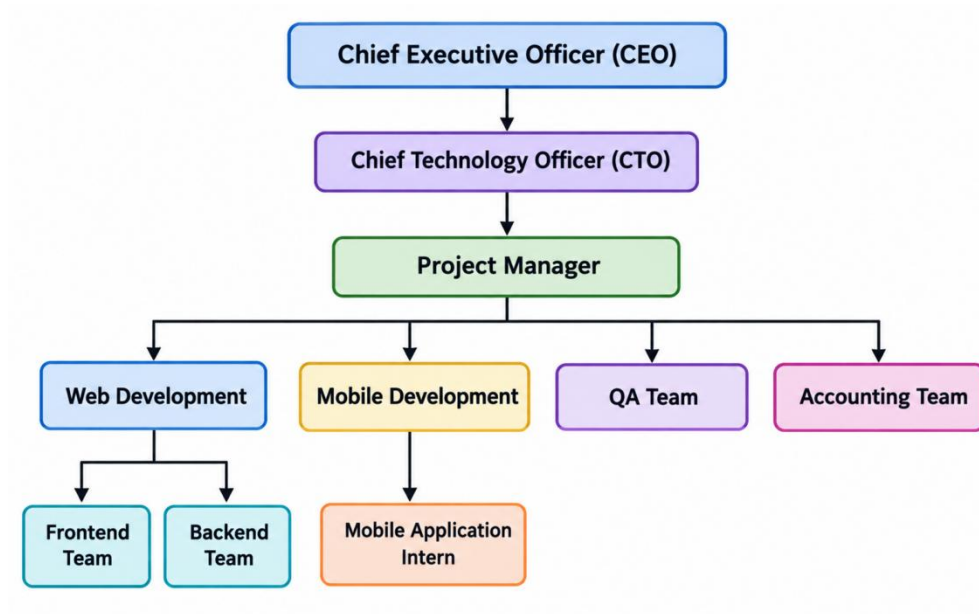

Figure 2.2: Organization Hierarchy

2.3. Working Domains of Organization

Aeditech Software Company provides software development services in different areas of information technology. The major working domains of the organization are as follows:

- **Mobile Application Development:** Developing cross-platform Android and iOS mobile applications using Flutter to provide efficient, responsive, and user-friendly solutions for clients.
- **Web Application Development:** Designing and developing responsive web applications according to client requirements.
- **Frontend Development:** Creating user-friendly interfaces using modern frontend technologies to improve user experience.
- **Backend Development:** Developing secure server-side applications, REST APIs, authentication systems, and database management using Django.

- **Quality Assurance (QA):** Testing software applications, identifying bugs, verifying functionality, and ensuring software quality before deployment.
- **Software Maintenance and Technical Support:** Providing updates, bug fixes, system improvements, and technical support for deployed software applications.

2.4. Description of Intern Department/Unit

My internship was conducted in the **Mobile Development Team** of Aeditech Software Company. The department is responsible for developing cross-platform (Android and iOS) mobile applications using Flutter and integrating them with backend services developed using Django REST Framework. PostgreSQL is used for database management, while REST APIs are used for communication between the mobile application and backend services.

As a **Mobile Application Development Intern**, I contributed to the development of the **Nibangsh Consultancy Application**. My responsibilities included designing responsive user interfaces, implementing Flutter widgets, creating student and administrator screens, integrating frontend components with backend APIs, handling image and document upload functionality, debugging application issues, and improving the overall user experience.

The internship followed a **hybrid working model**, allowing me to work remotely for most development activities while attending the office whenever required for project discussions, team meetings, code reviews, and mentor guidance. This working model helped me develop effective communication, time management, and self-learning skills while collaborating with the development team on real-world software projects.

Table 2.4 Internship Details

Particular	Time
Start Date of Internship	15 th June of 2026
End Date of Internship	16 th September of 2026
Total Duration	3 months
Office Hour	11:00 AM-6:00 PM
Working Hours	7 hours
Working Days	6 days
Holiday	Saturday
Position	Mobile App Developer (Flutter Intern)

CHAPTER 3 BACKGROUND STUDY AND LITERATURE REVIEW

3.1. Background Study

Mobile applications have become an important part of modern businesses by providing users with convenient and efficient access to services. In educational consultancy, mobile applications help simplify student registration, document submission, application tracking, and communication, reducing manual work and improving service quality.

The **Nibangsh Consultancy Application** is a cross-platform mobile application for Android and iOS, developed to digitalize consultancy services. It provides students with a centralized platform to manage their profiles, upload required documents, access study materials, practice MCQs, and monitor their application status. Administrators can efficiently manage student records, applications, notifications, and other consultancy-related information.

The application is developed using **Flutter** for the frontend and **Django REST Framework** for the backend. Communication between the frontend and backend is established through REST APIs using JSON. **PostgreSQL** is used as the database for storing and managing application data. The application has been submitted to the Apple App Store and is currently under review, and some modules and backend integrations are still being refined.

3.2. Literature Review

Information systems help organizations collect, store, and share information, improve communication, and reduce manual administrative work (Laudon & Laudon, 2020). Traditional consultancy services depend on physical visits, paper records, and manual document submission. A centralized digital system reduces these problems and makes services easier to access.

Mobile technologies extend this further because smartphones give users access to services and information from almost any location (Traxler, 2007). This makes mobile applications suitable for consultancy services, where students need to submit documents, follow their application progress, and access study material.

Usability is an important factor in mobile application design. Nielsen (1994) describes usability in terms of learnability, efficiency, memorability, error prevention, and user satisfaction. These principles guided the interface of the Nibangsh Consultancy Application, so students can complete forms, upload documents, and view their application status easily.

Cross-platform frameworks let developers build applications for several platforms from one codebase, which reduces development effort compared with separate native applications (Biørn-Hansen et al., 2018). Flutter uses the Dart language and a widget-based UI toolkit to build applications for both Android and iOS (Google, 2026).

Modern mobile applications also need reliable communication between the frontend and the backend. REST is an architectural style in which stateless client-server communication takes place through standard HTTP methods (Fielding, 2000). In this project, the Flutter application exchanges JSON data with a backend built using Django REST Framework (Django Software Foundation, 2026), and PostgreSQL stores student information, application records, documents, and notifications (PostgreSQL Global Development Group, 2026).

Security is also important because consultancy applications handle personal information and documents. Role-based access control lets users access only the functions that their assigned roles permit (Sandhu et al., 1996), which matches the separate student and administrator modules in the application. Common mobile security risks include weak authentication, poor input validation, and insecure data storage (OWASP Foundation, 2024), so these areas need attention during development.

Overall, these concepts form the foundation for the Nibangsh Consultancy Application as a centralized mobile platform for consultancy services, document submission, application tracking, study resources, and notifications.

CHAPTER 4 INTERNSHIP ACTIVITIES

4.1. Roles and Responsibilities

During my internship at **Aeditech Software Company**, I worked as a **Mobile Application Development Intern** in the Mobile Development Team. My primary responsibility was to contribute to the development of the **Nibangsh Consultancy Application**, a cross-platform mobile application designed to simplify consultancy services for students and administrators.

My work mainly focused on frontend development using the Flutter framework while collaborating with backend developers responsible for implementing APIs using Django REST Framework. Throughout the internship, I actively participated in different phases of the software development process, including requirement analysis, UI implementation, API integration, debugging, testing, and application improvement.

The major roles and responsibilities performed during the internship are as follows:

- Studied project requirements and participated in discussions to understand the consultancy workflow.
- Designed and developed responsive user interfaces using Flutter and Dart.
- Implemented reusable widgets to maintain consistency across different application screens.
- Developed student-side modules such as Login, Signup, Dashboard, Profile, Countries, Universities, Document Upload, Notifications, Books, and MCQ sections.
- Developed administrator-side screens for managing students, applications, notifications, books, and consultancy processes.
- Integrated Flutter frontend with Django REST APIs for authentication and data retrieval.
- Performed application testing, debugging, and UI improvements based on mentor feedback.
- Collaborated with backend developers to ensure smooth communication between frontend and backend services.

- Used Git for project updates and version control during development.

4.2. Weekly logs

The internship spanned 12 weeks / from Ashar1 to Ashoj1(15 June to 16 September 2026). Below is a summarized week-by-week log(table) of major activities.

Table 4.2: Weekly Log

Week	Task Performed
1	Attended orientation, requirement gathering project planning for Chhingu Online Service. Created Auth, Home, Services(LC Issue, CCV1, Final Flight, Job Application, Exam), Profile, Admin, User, and Process records screen.
2	Requirement gathering, and project planning and studied existing needs for Nibangsh Consultancy App. Finalized features(admin-overview,students,applications, profile(settings), students- home, countries, docs, profile) screens.
3	Created onboarding screen, auth(login, signup) screen, student form-fillup screen, dashboard screen.
4	Continue creating countries screen, docs screen, profile screen and made form editable .
5	Intregrated image/pdf chooser and camera, made notification screen. Started admin part(overview, settings,student profile, notifications) screens.
6	Added process 4-10 screens , extending the process-tracking flow. Separated user and admin steps, added approval screen in admin and book screen in admin and student part.
7	Created forgot password screen, FAQ screen(added contacts, email, map-location link, q/a). Added MCQ screen to both admin and students part and created university(course) screen.
8	Integrated the signup and login screens with the Django backend for real authentication. Tested the authentication flow between

	the Flutter frontend and the Django API. Reviewed the remaining screens to identify which modules still require backend integration. Began planning the full backend integration for the remaining app modules as the next phase of the project.
9	Integrated Books and MCQ modules with the Django backend. Implemented API communication and data retrieval functionalities for educational resources and MCQ content.
10	Added sample Books, MCQs, and question sets for testing purposes. Performed testing and validation of content management functionalities to ensure proper integration and data display.
11	Deployed the Django backend on the Render cloud platform. Implemented the MCQ Review feature, enabling students to review their answers after completing MCQ tests.
12	Completed final testing and application improvements. The application was submitted to the App Store and is currently under review, while the Google Play Store release is still in process. Continued testing and refining the application for release.

4.3. Description of the Project Involved During Internship

During the internship, I was assigned to work on the **Nibangsh Consultancy Application**, a cross-platform mobile application developed to digitalize educational consultancy services. The project aims to provide students with a centralized platform where they can complete consultancy-related activities without relying on manual paperwork or frequent office visits.

The application enables students to create accounts, manage their profiles, upload required documents, complete application forms, access information about countries and universities, practice MCQs, read study materials, receive notifications, and track the progress of their applications. On the administrative side, the application provides features for managing student records, reviewing submitted documents, monitoring

application processes, publishing notifications, managing educational resources, and maintaining consultancy information.

The frontend of the application is developed using **Flutter**, while the backend services are implemented using **Django REST Framework**. Communication between the frontend and backend is achieved through RESTful APIs that exchange data in JSON format. **PostgreSQL** is used as the database for storing and managing application data. The application is currently under review on the Apple App Store, its Google Play Store release is under process, and remaining modules are being refined and tested.

The project follows a modular architecture, allowing different features to be developed and maintained independently. This approach improves code organization, maintainability, and future scalability of the application.

4.4. Tasks / Activities Performed

Throughout the internship, I was involved in various development activities related to the frontend implementation of the Nibangsh Consultancy Application. These activities allowed me to gain practical experience in mobile application development and collaborative software engineering.

Requirement Analysis

Before starting development, I participated in requirement discussions with the project manager and mentors to understand the consultancy workflow, application features, and user requirements. This helped me understand how different modules should interact and what functionalities were expected from both student and administrator users.

User Interface Development

The primary responsibility during the internship was designing and implementing responsive mobile user interfaces using Flutter. Multiple screens were developed

according to the project requirements while maintaining consistency in colors, typography, navigation, and user experience.

The developed screens include:

- Splash Screen
- Onboarding Screen
- Login
- Signup
- Forgot Password
- Dashboard
- Student Profile
- Countries
- Universities
- Document Upload
- Notifications
- Books
- MCQ
- FAQ
- Student Application Process
- Admin Dashboard
- Student Management
- Process Management
- Admin Notifications
- Settings

Authentication Module

Authentication screens were developed to allow students to securely register and log into the application. The login and signup interfaces were later integrated with Django REST APIs to authenticate users and retrieve user information from the backend.

Document Upload Module

A document management feature was implemented that allows students to upload required documents in image or PDF format. Device storage and camera functionality were integrated so users could either capture images directly or select existing files

from their device.

API Integration

The Flutter application communicates with the Django backend using RESTful APIs. During the internship, Login, Signup, Books, and MCQ APIs were integrated successfully. API responses are received in JSON format, parsed within Flutter, and displayed appropriately in the user interface. Error handling and validation were also implemented to improve the user experience.

Testing and Debugging

Testing was performed throughout the development process to ensure the application functioned correctly. User interface issues, navigation problems, validation errors, and API-related bugs were identified and resolved. Continuous debugging helped improve application stability and performance.

Team Collaboration

The internship involved working closely with senior developers and backend developers. Regular discussions and code reviews helped identify issues early and ensured smooth integration between frontend and backend components. Since the internship followed a hybrid working model, collaboration was carried out through both office meetings and online communication.

CHAPTER 5 CONCLUSION AND LEARNING OUTCOMES

5.1. Conclusion

The internship at **Aeditech Software Company** provided me with valuable practical experience in mobile application development and exposed me to a professional software development environment. As a **Mobile Application Development Intern**, I contributed to the development of the **Nibangsh Consultancy Application** using **Flutter** for the frontend and **Django REST Framework** for the backend, with **PostgreSQL** used for database management.

Throughout the internship, I gained hands-on experience in designing user interfaces, integrating REST APIs, testing applications, and collaborating with team members. The internship also helped me improve my problem-solving, communication, and teamwork skills while understanding real-world software development practices.

Overall, the internship successfully bridged the gap between my academic knowledge and practical industry experience. It strengthened my technical and professional skills and provided a solid foundation for my future career in software development.

5.2. Learning Outcomes

The internship contributed significantly to my technical and professional development. The major learning outcomes achieved during the internship are described below.

5.2.1. Technical Skills

During the internship, I acquired practical knowledge and hands-on experience in various technologies and software development processes. The major technical learning outcomes include:

- Gained practical experience in developing cross-platform (Android and iOS) mobile applications using Flutter and Dart.

- Improved understanding of Flutter widgets, layouts, navigation, and responsive UI design.
- Learned how to consume and integrate REST APIs developed using Django REST Framework.
- Developed knowledge of JSON data handling and API communication between frontend and backend systems.
- Gained experience in implementing authentication interfaces such as Login, Signup, and Forgot Password screens.
- Learned to integrate image and PDF file selection using device storage and camera functionality.
- Improved understanding of database concepts through the use of PostgreSQL.
- Developed debugging and testing skills for identifying and resolving application issues.
- Learned how to organize project files and maintain clean, reusable code structures.
- Gained practical experience using Git for version control and project collaboration.

5.2.2. Professional Skills

In addition to technical skills, the internship helped me develop several professional competencies that are essential in the software industry.

- Improved communication skills through regular interaction with mentors and development team members.
- Learned the importance of teamwork and collaboration in software development projects.
- Developed problem-solving abilities while handling technical challenges and debugging issues.
- Improved time management skills by completing assigned tasks within deadlines.
- Learned to adapt to a professional working environment and follow organizational practices.

- Developed the ability to learn new technologies independently through documentation and self-study.
- Gained experience in understanding client requirements and translating them into software features.
- Improved analytical thinking and decision-making skills during development and testing activities.
- Learned the importance of software quality, usability, and maintainability in real-world applications.
