Acknowledgement

We would like to express our sincere gratitude to our teacher for their valuable guidance, encouragement, and continuous support during the preparation of this case study report. His suggestions and feedback greatly helped in improving the quality of this report.

We are also thankful to the concerned organizations and online resources that provided useful information regarding the Nagarik App and e-governance services in Nepal. Their information helped us understand the practical implementation of digital governance systems.

We would also like to thank our family members and friends for their motivation, support, and encouragement throughout the completion of this report.

Finally, we appreciate everyone who directly or indirectly contributed to the successful completion of this case study.

Abstract

This report presents a case study on the Nagarik App, a digital e-governance platform developed by the Government of Nepal to provide public services online. The purpose of this report is to analyze how digital technology can improve government service delivery and citizen accessibility.

The report addresses problems such as long queues in government offices, slow administrative processes, lack of transparency, and difficulty in accessing public services. The Nagarik App aims to solve these issues by offering online access to government documents and services through a mobile application.

The study also examines the benefits, challenges, implementation process, SWOT analysis, and future improvements of the system. This case study highlights the importance of e-governance in modern public administration and digital transformation in Nepal.

Chapter-1 Introduction

1.1 Introduction

The Nagarik App is available for free download on the Google play store for Android phones as well as the App Store for iPhones (now in Beta). Since it is in its early stages, it could be helpful in this regard. However, many others have detailed issues with registration and mobile verification. Furthermore, it has been demonstrated that a lot of people's data is false. Since this Nagarik App is still being developed, any faults would be resolved in subsequent updates, as well as the completed product will have a new, modern design. The Nagarik App would initially only provide limited government services. This software displays how the Nepalese government appears online. To eliminate the bother of having to carry a mountain of proof of identity while accessing any public service divisions or agencies, the Nagarik App was designed as a smartphone device. On January 15, 2021, the beta version of it has been made available, with 50 percent of the total of the services—including 9 federal services—in functioning. And ten days after launch, the app had indeed surpassed 100,000 downloads. However, it got several concerns about problems with nationality Identification and recognition, and the full-official version's release was postponed. The app is available to all Nepali citizens who are in possession of a mobile number registered under your name and Citizenship details, or, Passport details, or, Details of voter ID card.

1.2 Background Study

The Government of Nepal has been working toward digital transformation and modernization of public services. Traditional government services in Nepal often required citizens to physically visit offices, wait in long queues, and complete paperwork manually. This process was time-consuming and inefficient.

To improve public service delivery, the Government of Nepal introduced the Nagarik App. It is a digital platform that allows citizens to access various government services through their smartphones.

1.3 Problem Statement

The major problems addressed by the Nagarik App include:

- Long waiting time in government offices
- Manual paperwork and administrative delays
- Lack of transparency in public services
- Difficulty in accessing government documents
- Increased transportation and service costs for citizens

1.4 Importance of the System

The Nagarik App is important because it promotes digital governance and improves communication between citizens and government agencies. It helps citizens access services quickly and securely without visiting government offices physically.

1.4 Benefits of Nagarik App

- Easy access to government services
- Reduction in paperwork
- Time and cost saving
- Improved transparency and accountability
- Better citizen satisfaction
- Digital identity verification
- Faster service delivery

1.5 Scope of the Study

This study focuses on:

- Features and functions of the Nagarik App
- E-governance implementation in Nepal
- Benefits and challenges of digital governance
- Recommendations for improvement

1.5 Limitations of the Study

- Limited access to internal government data

- Dependence on secondary sources
- Rapid technological changes may affect findings
- User experiences may vary in different regions

1.6 E-Governance Model

The Nagarik App mainly follows:

- Government-to-Citizen (G2C) Model
- Government-to-Government (G2G) Model

The app connects citizens directly with government services digitally.

1.7 Working method

The Nagarik App in Nepal is a mobile application that enables citizens to access various government services and information through their smartphones. The app works in the following manner:

1. **Download and Installation** : Users need to download and install the NagarikApp from their respective app stores (e.g., Google Play Store or Apple AppStore).
2. **Registration**: Users need to register on the app by providing their personal information and creating a user account. They also need to link their mobile number with their user account.
3. **Authentication**: Once registered, users can log in to the app using their credentials and authenticate themselves through biometric identification (fingerprint or facial recognition).
4. **Access to Services**: The app provides access to various government services such as passport application, driving license renewal, birth registration, citizenship certificate, and so on. Users can select the service they require and follow the steps provided by the app to complete the process.
5. **Payment**: For some services, users need to make payments using the app's integrated payment gateway. They can pay using their credit or debit cards or through mobile wallets.
6. **Status Updates**: Users can track the status of their service requests through the app and receive notifications when their requests are processed.

Chapter-2 Analysis

2.1 Problems Being Faced

Despite its benefits, the Nagarik App faces several challenges:

- Limited digital literacy among citizens
- Internet connectivity issues in rural areas
- Data privacy and cybersecurity concerns
- Technical errors and system downtime
- Limited integration with all government agencies

2.2 Methodology

The methodology used in this study includes:

2.2.1 Data Collection

- Government reports
- Online articles
- Research papers
- User reviews

2.2.2 Analysis Techniques

- SWOT Analysis
- Comparative Analysis
- Observation of app features

2.3 Application of Course Concepts

The case study applies several e-governance and information system concepts:

- Digital Transformation
- E-Governance Framework
- Public Service Automation
- Information Management System

- Mobile Governance (M-Governance)

2.4 SWOT Analysis

2.4.1 Strengths

- Easy access to government services
- User-friendly mobile application
- Reduces paperwork
- Saves time and transportation cost

2.4.2 Weaknesses

- Dependence on internet connectivity
- Limited awareness among rural citizens
- Technical problems during high traffic

2.4.3 Opportunities

- Expansion of digital services
- Integration with more government departments
- Promotion of cashless and paperless governance

2.4.4 Threats

- Cybersecurity risks
- Data breaches
- Resistance to digital adoption
- Technical infrastructure limitations

2.5 ER Diagram

Chapter-3 Alternatives

3.1 Possible Alternatives

3.1.1 Alternative 1: Traditional Manual System:

Citizens physically visit government offices for services.

3.1.2 Alternative 2: Web-Based Government Portal

Government services are provided through websites only.

3.1.3 Alternative 3: Mobile-Based E-Governance System (Nagarik App)

Services are accessible through smartphones.

3.2 Decision Criteria

The following criteria can be used to evaluate alternatives:

- Accessibility
- Cost effectiveness
- Ease of use
- Service speed
- Security & Transparency
- User satisfaction

Among these alternatives, the Nagarik App is the most efficient and user-friendly option.

Chapter-4 Recommendation and Implementation Plan

4.1 Recommendation

It is recommended that the Government of Nepal further improve and expand the Nagarik App by increasing service integration, improving cybersecurity, and promoting digital literacy programs.

4.2 Implementation Steps

Step 1: Infrastructure Development

- Improve servers and cloud systems
- Increase internet accessibility

Step 2: Security Enhancement

- Implement stronger cybersecurity systems
- Use biometric and multi-factor authentication

Step 3: Public Awareness Programs

- Conduct digital literacy campaigns
- Train citizens to use the app effectively

Step 4: Integration of More Services

- Connect all government departments
- Add payment and tracking systems

4.3 Required Equipment and Expertise

- Software developers
- Cybersecurity experts
- Cloud infrastructure
- Database administrators
- Mobile application developers

4.4 Responsibility Distribution

Responsibility	Responsible Party
App Development	IT Team
Security Management	Cybersecurity Team

Public Awareness	Government Agencies
Maintenance	Technical Support Team

4.5 Time Frame

4.5.1 Short-Term Plan

- Bug fixing, Awareness campaigns, Server improvement

4.5.2 Medium-Term Plan

- Integration with additional services, Security upgrades

4.5.3 Long-Term Plan

- Nationwide digital governance expansion, Smart government ecosystem development

4.6 Estimated Cost

Costs may include:

- Software development, Server infrastructure, Security systems, Employee training, Public awareness campaigns

4.7 Organizational Impact

Positive impacts include:

- Faster service delivery, Reduced administrative workload, Better transparency, Improved public trust

4.8 Expected Problems

- Technical failures, Resistance from traditional users, Cybersecurity threats, Funding limitations

4.9 Contingency Plans

- Backup servers, Technical support centers, Regular system updates, Emergency recovery plans

4.10 Challenges During Implementation

- Low digital literacy, Poor internet connectivity, Data privacy concerns, Coordination among government departments

Chapter-5 Conclusion

This report discussed the Nagarik App as an important e-governance initiative in Nepal. The study showed how digital governance can improve public service delivery, transparency, and citizen satisfaction.

The report recommends expanding and improving the Nagarik App through better infrastructure, enhanced security, and wider service integration. Implementing these recommendations will help Nepal move toward a more efficient and modern digital government system.

Successful implementation of the recommendations will result in:

- Faster public services
- Reduced paperwork
- Increased transparency
- Better accessibility for citizens
- Stronger digital governance system

In the future, the Nagarik App can become a complete smart governance platform integrating all public services digitally across Nepal.
